Patient-Centred Artistic Dentistry

One Visit Smile Rejuvenation

When it comes to improving aesthetic appearance and self esteem, most patients focus on acquiring an attractive smile.

The success of free hand-hand bonding and composite reconstruction in anterior teeth depends on harmonious integration of various elements: thorough understanding of hard and soft tissue conservation, natural function and aesthetics, restorative techniques and the science of dental materials.

The Patient-Centred Artistic Dentistry (PCAD) approach will assist in closing the gap between the artistic skill of the dentist and patient's perception and aesthetic satisfaction. Dentist and patient must work together to achieve satisfactory outcome of the dental treatment. This technique will improve the patient's oral health and quality of life.

This lecture will enhance the confidence of the dental practitioner in addressing aesthetically complex cases using dependable dental materials in achieving optimal function and aesthetics as approved by the patient in a relatively short and predictable manner.

Learning Outcomes

- Understand PCAD approach and one visit smile rejuvenation
- Improve the conservation of hard and soft tissue
- Learn how to assess and modify gingival symmetry to improve emergence profile of the teeth in conjunction with function and aesthetics
- Learn and understand the application of the 'TRUE SMILE' design principles alongside the PCAD approach
- Develop practical, reproducible dental artistic skills using state-of-the-art, dependable dental materials
- Enhance the confidence of dental practitioners in assessing aesthetically complex cases and applying the PCAD approach in the dental practice.

Seminar Details

Registration: 9.30am
Seminar Times: 10.00am to 5.30pm

Cost: \$450.00 (GST inclusive)
Early Bird Registration: \$395.00 (GST inclusive) *
